24. plate	el plato		-
25. ?	??		-

Parley

- Utility which helps in memorizing things
- Many test types and article training
- Fast setup and easy lesson management

KHangMan

- Digital representation of the handman game
- Many categories of words to play with
- Many languages included

About us

The KDE-Edu project was started in July 2001. The goal of the project is to develop Free Educational Software (GPL licence) within the KDE environment. This software is mainly aimed to schools, to students and to parents at home as well as to adults willing to extend their knowledge.

A new KDE module was created, the kdedu module. The applications in that module are fully KDE compatible (use of KMainWindow, XML GUI, ...) and get a proper documentation handbook in docbook format. Thus, all applications interfaces and documentation are translated in more than 65 languages, via the I10n KDE teams.

The kdedu module joined the KDE 3.0 official release.
